PROJECTS

WHISTLER - PHP, LARAVEL 8, MYSQL AND SOCIALITE

- According to the user needs the application will track and update the job applications made online
- I worked in a team of five people, working as a full stack developer. My work was to design migrations and working on the backend.
- Link: [Whistler](#)

SMARTO- ANDROID APP

- The app provides a game for general knowledge about pop culture, history.
- I worked solo in this project and my work was to design and implement the software.
- Link: [SmartQ](#)

Loan Prediction - | Python, Anaconda, Pandas, Matplotlib

- According to the input data the prediction will be produced if they are met the criteria.
- I worked alone as a hobby project idea I found online.
- Link: [Loan Prediction](#)

PUZZLER - | JS, HTML5, CSS3, MYSQL

- Puzzler is a memory enhancement app and uses a 'spaced repetition' technique to help users memorize designs.
- I worked alone to create an app and design application in a short period of time.
- Link: [Puzzler](#)

Social Sign App - | PHP, HTML5, CSS3, MySQL, XAMPP

- An app where people can normally go to sign petitions to stop wars and change the world.
- I worked in a group of two people and I worked on both front-end and back-end
- Link : [Social Sign App](#)

Courier Services | C#, XML, MSSQL, TFS, Azure, .net Core

- Vendors can schedule pickup for courier services up on request from user.
- I worked in a team of two people working as a full stack developer. My work was to design, implement scheduling the pickup and take user experience in account to improve the UI/UX design of the application.
